A: Might look into adding colospace to your assembly so you can use the proper casing Incidentally, what you posted is not from a .NET assembly (it's from a Component Object Module, which is a native programming language) Edit: Ok, so, going to play around with this, but I'm assuming you're using IO.FileSystemWatcher if you want to catch changes in a file. You are right, you need to include a case-insensitive comparer if you want to detect case-sensitive changes, but there's a couple of gotcha's. You can't do an equals with a case-insensitive comparer. Try this: using System.IO; using System.IO.FileSystemWatcher; public void ProcessFileChange(object sender, FileSystemEventArgs e) { if (e.FullPath.Contains("\_")) { txtchanged.Text = "Changed"; } } When using a case-insensitive comparer, the only way to tell if you've changed the file is to compare the current value of the file to what you stored in the previous iteration. It's kind of a pain, so your best bet might be to include the previous file's contents as part of your event args or another field of the event args. This is probably the largest gotcha, though, so do your homework before implementing anything. Among the men who most need to follow suit is the drummer, per the reality of our society. The drummer might be a black guy like Jones, who brings specific energy to his role and has been willing to risk it all to address a crime committed by a powerful and deadly institution, or a white guy like Tucker Carlson, who makes public life seem distinctly more interesting because he does so in defiance of the orthodoxy of this particular moment. We also need a dose of resilience: someone unafraid to tell the truth about women and men of color who have come into their own and are not afraid of white men anymore. Someone who will speak out and be counted, but without losing a sense of dignity and perspective. Someone who can sell himself as a "fighter" without being self-serving. Someone who has the 648931e174
